| <ul style="list-style-type: none"> • Loopy Part Models for Face Detection | <i>INRIA-Saclay</i> |
| Advisor: Iasonas Kokkinos and Dhruv Batra
Augmented the Deformable Parts Model (DPM) based face detector and landmark estimator with loopy part models. Utilized dual decomposition and an augmented lagrangian technique called ADMM (Alternating Direction Method of Multipliers) to solve the resulting inference problem efficiently, often achieving zero primal dual gap. Applied the model to get results comparable to the state of the art for detection and landmark localization | Summer, 2014 |
| <ul style="list-style-type: none"> • Understanding and Predicting Importance | <i>Virginia Tech</i> |
| Advisor: Devi Parikh
Formulated importance prediction in abstract images as a structured prediction problem, where importance is defined as the likelihood of an object in an image being mentioned in a description. Incorporated task related insights into feature and model (structure) selection. Predicted importance of objects at upto 86 % accuracy on the Abstract-50S dataset | Spring, 2014 |
